

Bold iOS challenge

In this challenge is asked for the candidate to create an iOS application with the following requirements:

- List the users.
- List all the albums of a user with the first image as the album thumbnail.
- List all the images of the album the ability of changing between a single column and multi column is a plus.
- List all the posts of a user.
- Show the comments of a post with the post title on the navigation bar, post body on top of all comments, the body being sticky while the comments are scrollable is a plus.
- List all todos of a user and its current state.

For the challenge the candidate must use the <http://jsonplaceholder.typicode.com/> for all the request.

Is considered a plus if Unit Tests, UI Tests and Integration Tests are added to the project. There are no limitations regarding architecture, frameworks used must be public.

The candidate has 7 days to deliver the challenge through a GitHub or GitLab repository.
